

doxil the first fda approved nano drug lessons learned - *doxil the first fda approved nano drug 1995 is based on three unrelated principles i prolonged drug circulation time and avoidance of the res due to the use of pegylated nano liposomes ii high and stable remote loading of doxorubicin driven by a transmembrane ammonium sulfate gradient which also allows for drug release at the tumor and iii having the liposome lipid bilayer in a, cell penetrating peptides 20 years later where do we* - *twenty years ago the discovery of peptides able to cross cellular membranes launched a novel field in molecular delivery based on these non invasive vectors most commonly called cell penetrating peptides cpps or protein transduction domains ptds, bioengineering of artificial antigen presenting cells and* - *figure 1 the major interactions between t cells and dcs and the three signals leading to activation and expansion of t cells signal 1 is antigen presentation by interaction between the peptide mhc complex and tcr signal 2 is co stimulation by co stimulatory molecule interaction, resolve a doi name* - *type or paste a doi name into the text box click go your browser will take you to a web page url associated with that doi name send questions or comments to doi, pps central specific links* - *this is an extremely big file those wanting shorter versions please stop then go to*
